### Introduction to Weapon Ammunition - SlideShare

SA (Small Arms) Ammunition and Manufacturing process. Small Arms Ammunition refers to a complete round/cartridge or its components, including bullets or projectiles, cartridge cases, primers/caps and propellants that are used in small arms. Small Arms Ammunition is primarily cartridge-based.

### BSS Materiel Limited | Ammunition

The 4.73 × 33 mm caseless ammunition used in the Heckler & Koch G11 rifle, shown disassembled. The components are, from left to right, the solid propellant, the booster, the bullet, and a plastic cap that serves to keep the bullet centered in the propellant block. Caseless ammunition is a type of small arms ammunition that eliminates the cartridge case that typically holds the primer, propellant, and projectile together as a unit.

### Caseless ammunition - Wikipedia

The Lightweight Small Arms Technologies program is funded by the U.S. Joint Service Small Arms Program, with the goal of significantly reducing the weight of small arms and their ammunition. Following a series of military programs to investigate advances in small arms, the LSAT program is the US military's latest project to replace existing US small arms. Tactical concepts and the research from the previous small arms programs indicates that lightening small arms is the first significant step to
