Physioex Exercise 3 Answers - 12/2020 - Course f
8/14/2020 PhysioEx Exercise 9 Activity 6 4/4 Your answer: ADH is
released from the posterior pituitary gland when there is a decrease in
osmolality over 1%. This shows that there is too little water in the body,
and water should not be excreted. ADH is then released to act on the
collecting ducts to prevent them from secreting water into the urine.
Which hormone (aldosterone or ADH) has the ...
